Tianyi Chen

E-mail: ctianyi7@gmail.com mobile: 669-900-2291

EDUCATION

Graduate School of Arts and Sciences, Boston University **2019 - 2023**
- Ph.D., Department of Computer Science

Graduate School of Arts and Sciences, Boston University **2017 - 2019**
- M.S., Department of Computer Science

School of Software Engineering, Xi'an Jiaotong University **2013 - 2017**
- B.S., Department of Software Engineering

PUBLICATION

- Charalampos E. Tsourakakis, Tianyi Chen, Naonori Kakimura, Jakub Pachocki, "Novel Dense Subgraph Discovery Primitives: Risk Aversion and Exclusion Queries", *European Conference on Machine Learning and Principles and Practice of Knowledge Discovery in Databases* (ECML PKDD) 2019.
- Ming Fan, Jun Liu, Xiapu Luo, Kai Chen, Tianyi Chen, Zhenzhou Tian, Xiaodong Zhang, Qinghua Zheng, Ting Liu, "Frequent Subgraph based Familial Classification of Android Malware", *IEEE 27th International Symposium on Software Reliability Engineering* (ISSRE) 2016, ***BEST RESEARCH PAPER AWARD.***

EXPERIENCE

Software Engineer Intern, Google **May 2019 - August 2019**

Project: Android Malware Detection Based on Dynamic Analysis Trace
- Use C++ flume to fetch and preprocess Android APK evaluation data.
- Implement LSTM and word2vec with TensorFlow Estimator to extract features from dynamic analysis sequence.
- LSTM model reach 96% recall rate compared with 88% using baseline, find new malware missed by the existing models.
- Implement HTTP header order feature and add it to production pipeline.

Research Assistant, Harvard University **May 2018 - May 2019**

Project: Functional Object-Oriented Graph Automation platform
- Transform Python program into workflow for reproducing computations and reusing data. The project is to be open source within a month, and is attracting users from Corning and Toyota.
- Investigated on the performance of graph database Neo4j and deployed it to improve query efficiency in workflow structures ten times compared with PostgreSQL.
- Designed and built front-end GUI with HTML, CSS and JavaScript, jQuery. Built server on Google Cloud with Python Flask to handle requests.

Research Assistant, Boston University **December 2017 - May 2019**

Project: Densest Subgraph Discovery over Uncertain Graph
- Designing approximation algorithms to solve densest subgraph discovery problem in uncertain graph with guarantee.
- Used linear programming with relaxation on large-scale uncertain graph to achieve precise solution in polynomial time.
- Collected data from IMTB and constructed open-source uncertain graph datasets.

Research Assistant, Xi'An Jiaotong University **December 2014 - June 2017**

Project: Detection and Classification of Android Malware
- Managed data collection of permissions and sensitive APIs used by 10000 malicious Android APP samples, de-compiled those Apps and analyzed the Manifest files as well as Smali codes.
- Investigated function-call relation graph in samples, and participated in discovery of sensitive subgraph structure.
- Cleaned API data and trained random forest model with both API features and sensitive subgraph features.

SKILLS

Programing language: C++, Java, JavaScript, SQL, Python, Git, HTML, CSS.
Machine learning: TensorFlow, numPy, Pandas, Scikit-Learn, Matlab, WEKA.
